

Cloud Computing Lab Test1:

Outline of LabTest

First I get the values from url then I parse each value that I got from url into local integer values then I have if statement check if values have been entered otherwise return a message. Also I have if statements to check if A is greater than B and if C is greater than D if these conditions true then we do the sum and get result placed into local integer and we print the result afterwards.

Full Name: Tomas Beliskis

Student ID: C11477418
